

MyCoreRetail

Store User Guide — for managers, sales staff,
warehouse and delivery crews

Point of sale, inventory, purchasing, fulfillment,
delivery routing, warehouse, service and reporting
for furniture, mattress and home-goods retailers.

Edition: September 2026

Covers the store application: selling, inventory, purchasing, fulfillment,
deliveries, warehouse, service and reports.

1. Welcome to MyCoreRetail

MyCoreRetail runs a furniture, mattress or home-goods store from the first quote to the last delivery. It is built for how these stores actually work: big-ticket sales with deposits and financing, items that ship from a vendor weeks later, deliveries on trucks, pickups from a warehouse, commissions paid when goods go out, and a CPA who needs clean numbers at month end.

Your store, your data

Each store runs as its own completely separate system with its own staff, inventory, customers, sales, settings and look. Staff sign in with a name and PIN on any register, tablet or phone that has opened the store link.

The store register sign-in: tap your name, enter your PIN.

The flow of a sale, end to end

Step	Where	What happens
1. Sell	New sale	Customer, items, fulfillment (take today / hold for pickup / delivery), payment terms, payment.
2. Order from suppliers	Inventory → Purchase orders	Anything not in stock becomes a customer-order line; one click makes POs per supplier.

Step	Where	What happens
3. Receive	Purchase orders → Receive items	Stock goes up, customer orders flip to Ready, vendor invoice is recorded, labels print.
4. Pick & stage	Warehouse (optional)	Pull the order by bin, scan to pick, stage it for the truck or will-call.
5. Schedule & route	Deliveries & pickups	Calendar shows capacity; route day optimizes stops per truck with ETAs.
6. Deliver or hand over	Crew view / Pickups	Signature, photos, balance collected; partial deliveries create the follow-on automatically.
7. Get paid & report	Reports	Payments, sales tax, COGS, commissions (paid when delivered and paid in full).

Language used in this manual “Order from supplier” (older screens may say “special order”) means an item the store must buy from a vendor for a specific customer. “Fulfillment” means how the customer gets the goods: takes it today, hold for pickup, or home delivery.

2. Getting started

2.1 Opening your store

- 1 Open the store link you were given (it looks like ...#store/NFM01) on each register, tablet and phone. The device remembers your store from then on.
- 2 Tap your name and enter your PIN. The first manager login is set up when the store is created; managers add everyone else under Settings → Staff & permissions.
- 3 Bookmark the page or add it to the home screen on phones and tablets used by the crew.

2.2 First-day checklist

- Settings → Store & tax: store name, phone, address and map pin, tax brackets, logo and colors.
- Settings → Delivery & routing: trucks, delivery days, capacity, delivery price matrix.
- Settings → Pricing & financing: supplier cost rules, payment methods, lease/finance companies, protection plan rules.
- Settings → Staff & permissions: add staff with PINs, roles and limits.
- Inventory: upload your items from a spreadsheet (chapter 4.6) or add them one by one; enter suppliers.
- Settings → Optional features: turn on only what the store uses.

2.3 Registers, devices and switching users

- A device that has opened the store link shows only this store's sign-in.
- Tap your name, enter your PIN. Managers add staff under Settings → Staff & permissions.
- Idle lock: the register locks after a few minutes without a touch (Settings → Pricing → Shared register security). An unfinished sale is restored when someone signs back in.
- Switch user: account menu (⋮ at the bottom of the sidebar) → Lock register / switch user.
- The account menu also holds Clock in / out (when the Time clock feature is on) and dark mode.

2.4 Branding

- Settings → Store & tax → upload the logo; it appears in the sidebar, on the register, sign-in, invoices, slips, tags and labels (Logo placement controls each).
- Store colors: pick one of 16 recommended themes or enter custom brand colors; every screen and the sign-in follow it.

3. Settings, tab by tab

Everything a store can change lives in Settings. Managers (or anyone with the Settings permission) can edit them. Most lists are bubbles: type a value, press Enter or Add, click × to remove.

3.1 Store & tax

- Store name, phone, address and map pin (paste coordinates or a Google Maps link) — the pin drives routing and delivery pricing.
- Tax brackets: name each rate (state + county, city, out of state...), set the default with the radio button. The register opens on the default; customers can be pinned to a bracket, marked exempt, or given a custom rate.
- “How did you hear about us?” choices (required on every customer).
- Address suggestions: default city/state/ZIP and a street list for your area so addresses complete themselves.
- Store colors, logo and logo placement.

3.2 Delivery & routing

- Departure time, average speed (mph), minutes per stop, setup/haul-away extras.
- Calendar capacity: max stops per truck per day and the days you deliver.
- ETA alerts: how many days before an expected date to raise a flag.
- Delivery price matrix: rows are order-subtotal bands, columns are road miles from the store; plus delivery options (white-glove +\$50, curbside −\$20) that adjust the matrix fee.
- Trucks & crews (capacity in pieces, crew names) are managed from Deliveries → More.

3.3 Mattress & returns

- Sleep-trial nights, comfort-exchange fee, whether a protector is required for the trial, restocking %, floor-sample days and markdown %.
- Mattress sizes, comfort levels and types (bubbles) used on the item form.

3.4 Pricing & financing

- Landed cost & automatic pricing — per supplier: freight %, extra cost %, surcharge, multiplier, rounding and cents. “Store default” only covers items with no supplier. An at-a-glance table compares every supplier.
- Multiplier by category, standard colors and finishes, categories & sub-categories.
- Payment methods and card brands offered at the register.
- Lease-to-own & financing companies with the “charges tax up front” rule, merchant fee and default term.
- Card processing & terminals: the card panel (last 4 required), verification and same-day pickup alerts, terminals, surcharge, and the relay URL for integrated processing.

- Protection plans: % of subtotal, min/max, rounding, plan cost %, plan commission %.
- Low-margin warning, discount limit, quote validity, require customer details, hold goods until paid in full.
- Label printer (Zebra connection, stock size, dpi, logo on labels) and shared register security (idle lock, salesperson PIN).

3.5 Staff & permissions

Roles set the defaults; open a person to fine-tune every screen and action, their discount and margin limits, commission rate and plan rate. See chapter 12.

3.6 Optional features

Promotions, multiple locations & transfers (warehouse / showroom), ups & close rate, physical stock counts, inventory analysis & scorecards, accounting export, time clock, warehouse picking & storage. Turn on only what the store uses.

Settings

Store & tax Delivery & routing Mattress & returns Pricing & financing Staff & permissions **Optional features**

Switch on the modules this store wants. Everything else stays out of the way.

- ☒ **Promotions & sale pricing**
Date-ranged sales by item or category; POS and price tags apply them automatically.
- ☐ **Multiple locations & transfers**
Track stock per showroom / warehouse and move it with transfer sheets.
- ☒ **Ups & close rate**
Salespeople log walk-ins; reports show close rate and average ticket.
- ☒ **Physical stock counts**
Count sheets by bin, blind counts, one-click adjustments.
- ☒ **Inventory analysis & scorecards**
Aging, turns, GMROI, dead stock, vendor performance, team scorecards.
- ☒ **Accounting export**
Sales journal CSV and QuickBooks IIF for the bookkeeper.
- ☐ **Time clock**
Clock in/out from the register; hours by staff.
- ☒ **Warehouse picking & storage**
For stores with a real warehouse: storage bins and zones, put-away on receiving, daily pick lists with scan-to-pick, and staging areas for orders waiting to be loaded or handed over.

Optional features — switch on what the store uses.

3.7 Data & backup

Export a full backup of the store, import one, or reset sample data.

4. Inventory

Inventory (also called stock or items) holds everything you sell: items, kits, packages, suppliers, purchase orders, price tags, promotions and stock counts.

Northside Furniture & Mattress
Store NFM01

Inventory Items, kits, packages, suppliers and stock

Items Kits Packages Purchase orders Suppliers Price tags Promotions Stock counts

NFM0-1002 HL HRL-200-SL	Harlow loveseat, slate Living Room > Loveseats > Harlow > Slate / Performance fabric > Bin A1	Northline Upholstery	\$518.40 cost \$480.00	\$1,099.00	52.8%	2
NFM0-1003 BA BRM-100-RU	Bram accent chair, rust Living Room > Accent chairs > Bram > Rust / Velvet > Bin A2	Northline Upholstery	\$226.80 cost \$210.00	\$399.00	43.2%	6 markdown
NFM0-1004	Delta power recliner Living Room > Recliners > Delta	Northline	\$421.20			

Inventory → Items: photos, SKU/model, category and collection, landed cost, price, margin, stock.

4.1 Adding an item

- Identity: SKU/barcode (Auto generates one), model #, collection, name, category → sub-category, supplier, color, cover/finish, size, dimensions, photo, vendor item #, bin.
- Mattress fields appear for the Mattress category: comfort, type, sleep trial.
- Cost & price: vendor cost, freight (blank = supplier's %), extra cost %, surcharge, landed cost (calculated), multiplier, selling price (auto unless manual), MSRP, MAP.
- Stock: on hand (per location when locations are on), reorder point, pieces per unit (used for box counts and truck loading), warranty years.
- Flags: floor sample; this is a kit (components); matching pieces for “goes with this”.

Add item

SKU / barcode: NFM0-1001 Auto Model #: e.g. B2587-58 Collection: e.g. Alder

Name: e.g. Alder king panel headboard

Category: Bedroom Sub-category: — Vendor / supplier: None

Color: Cover / finish: Leather, walnut veneer.. Size: King, 84in... Dimensions (W x D x H): 84" x 38" x 36"

Vendor item #: Warehouse bin: Photo: Choose File No file chosen

Cost & price
No vendor selected — store default cost rules apply.

Vendor cost: 0 Freight \$ (blank = 8% of cost): Extra cost % (blank = 0%): Surcharge \$ (blank = \$0.00):

Landed cost: \$0.00 Multiplier (blank = x2): Selling price (up, no cents): 0 Auto Compare-at / MSRP:

☐ manual price (don't auto-update)

MAP — vendor minimum advertised price: promotions & tags never go below t Matching pieces (shown as "goes with this" at the register): Search a matching item...
None yet.

The item form.

4.2 Landed cost and automatic pricing

Landed cost = vendor cost + freight + extra cost % + surcharge. Selling price = landed cost × multiplier, rounded (up/down/nearest, whole dollars or .99/.95), never below the vendor's MAP.

Rules stack, most specific wins: a value typed on the item → the supplier's rule → the category multiplier → the store default. Change a supplier's rules under Settings → Pricing and use Re-price items to push the change through its catalog. Margins everywhere use landed cost.

4.3 Suppliers

Inventory → Suppliers: contact, account #, lead time, payment terms, minimum order, and the supplier's own cost rules. Suppliers can carry a catalog feed (JSON/CSV) and, when MyCoreRetail has connected that vendor, a shared catalog you pull from at your own markup.

Inventory Items, kits, packages, suppliers and stock

Items Kits Packages Purchase orders **Suppliers** Price tags Promotions Stock counts

Suppliers with their own freight, cost and markup rules. Items follow their supplier's rules unless overridden on the item. More ▾ Add supplier

Supplier	Items	Lead / terms	Freight	Extra / surcharge	Multiplier	Catalog		
Ashwood Manufacturing Dana Reyes · 800-555-0140 · orders@ashwood.example · acct HT-2231	13	21 days	8%	0% · \$0.00	×2.1	feed	Edit	Re-price items
Northline Upholstery Sam Okafor · 800-555-0177 · sales@northline.example · acct NL-889	5	35 days	8%	0% · \$0.00	×1.95	manual	Edit	Re-price items
Serenity Sleep Co. Priya Menon · 800-555-0199 · dealers@serenitysleep.example · acct SS-4410	16	10 days	8%	0% · \$0.00	×2.2	manual	Edit	Re-price items

Suppliers with their freight, extras and multiplier side by side.

4.4 Kits and packages

- Kit = one SKU built from other SKUs (King bed = headboard + footboard + rails). Kit stock is what you can build; selling the kit takes the components out of stock; cost and price roll up from the pieces.
- Package = a bundle sold at one price (Alder 5-piece bedroom). Build it under Inventory → Packages (kits can be inside). At the register Add package drops it in as a group; add or remove pieces freely.

4.5 Locations, showroom and floor models

With Multiple locations on, stock is tracked per location (Warehouse, Showroom, more). A location marked display floor holds floor models: the catalog says “4 deliverable · 1 on the floor”, only warehouse stock counts as deliverable, and the register asks you to mark a line Floor sample before selling the floor unit. Transfers move pieces with a printable sheet.

4.6 Uploading inventory from a spreadsheet

- 1 Inventory → More → Download CSV template and fill it (or export your existing sheet as CSV).
- 2 More → Upload inventory (CSV) → choose the file.

- 3 Match columns: every field shows the column it will read; fix any guess. SKU and name are required.
- 4 Preview & validate: new vs updated, rows that will be skipped and why, categories or suppliers that will be created.
- 5 Import. Prices in the file are kept as manual; blank prices are auto-priced from landed cost.

4.7 Labels and price tags

- Labels (warehouse, scannable Code 128 SKU barcode, logo): item rows → Label; tick rows → Labels (n); More → Print labels...; purchase orders and invoices have their own Labels buttons.
- Price tags: Inventory → Price tags (shelf, hang tag, mattress card, small barcode) or tick catalog cards → Print tags.
- Zebra printers: see chapter 13.

4.8 Promotions and stock counts (optional)

- Promotions: date-ranged % or \$ off, store-wide, by category or by item; applied at the register and on tags; never below MAP.
- Stock counts: blind or open counts by category/location, variance review with cost impact, apply adjustments.

4.9 Catalog

A browsable, picture-first view of everything with tabs for Items, Kits and Packages, filters by category/sub-category/collection and search. Tap a card for details, spec sheet, tag or label; Add builds a sale and Open sale takes it to the register.

Complete sale

Preview Save quote

New sale — items on the left, totals and payment on the right.

5.1 Step by step

- 1 Customer (required): choose or + New. First/last name (or a company name), phone, address and “how did they hear about us?” are mandatory. A customer without a referral shows a dropdown right under the customer.
- 2 Salesperson: defaults to you. Split shares the deal between people or with the House by percentage.
- 3 Items: type a SKU, name or size; scan a tag; or use Add package. “Goes with this” suggests matching pieces from the same collection/model. Add a charge: setup, haul-away, protection plan, deposit, custom.
- 4 Per line: quantity, price, order-from-supplier ↔ treat as in stock, Floor sample, As-is, who pays (lease/finance company or customer).
- 5 Discount (% or \$), package pricing (tick lines → Group as package), tax bracket.
- 6 Fulfillment (required): Customer takes it today · Hold for pickup later (planned date) · Home delivery (option and fee from the matrix).
- 7 Payment terms: Pay now, Financing, Lease-to-own, Layaway.
- 8 Payment now: card (card panel), cash (shows change), check, gift card, store credit, the lease/finance company's tender, or any tender you've added.

- 9 Complete sale → invoice prints. Save quote keeps it as a quote with an expiry and follow-up.

5.2 Fulfillment choices

Choice	Use when	What the app does
Customer takes it today	They leave with in-stock goods	Lines are marked delivered now; anything not in stock is held for pickup when it arrives.
Hold for pickup later	In stock but collecting later, or ordered goods	Creates a pickup on the Pickups tab: Awaiting stock → Ready → Picked up. Planned date + reminder.
Home delivery	You deliver	Creates a delivery: Awaiting stock → To schedule → Scheduled → Loaded → Out → Delivered.

5.3 Margin viewer

Double-tap the Sale title (or press M). Staff with “see margin” see the margin % on the sale, the store target and their commission — no dollars of cost. Managers and anyone with “see costs” get the full panel: landed cost, gross profit, financing fee and the lowest price that still hits target. Margin is calculated on merchandise only; plans and services are shown separately.

5.4 Approvals and limits

- Discounts over the person's limit, prices below their limit, package prices under limit, completing with a balance, out-of-policy returns and price changes for staff who can't edit prices all ask for an approver's PIN.
- A minimum-margin floor per person blocks the sale below that margin without approval.
- Vendor MAP is a hard floor for prices, promotions and tags.

5.5 Card payments

Choosing Card opens the card panel. Manual card machine: card type and the last 4 digits (required), name on card, optional auth/reference. A reminder tells the seller to verify the name on the card matches the invoice and to check ID; for same-day pickups a red caution describes the “rental truck outside” fraud pattern. With an integrated terminal (relay connected) the panel charges the terminal and fills everything in.

Card payment — manual

Verify before charging: the name on the card must match the name on the invoice (Priya Natarajan). Ask for photo ID and compare the signature. If they don't match, do not run the card.

Amount 2046.52

Run the card on your card machine, then enter the last 4 digits from the receipt.

Card type Visa Last 4 digits of the card * 1234 Name on card Priya Natarajan

► Add auth code / reference # (optional)

Entry Swipe

☐ Name on card matches the invoice and photo ID was checked

Cancel Record card payment

Card panel with verification reminder and required last 4.

5.6 Financing, lease-to-own and mixed tickets

Pick the company under Payment terms; every product line gets a who-pays tag. A company that doesn't charge tax up front gets no tax on its items (the lessor remits it); the customer's own items and up-front-taxed companies are taxed. Several companies can be on one ticket; the summary lists each company's amount, tax and fee, then the customer's portion; Payment now offers one tender per company. The invoice prints each company's items and a "Paid by ..." line.

5.7 Protection plans, services, floor samples, as-is

- Protection plan: auto-priced at 10% of merchandise (rounded to \$...49/\$...99, min \$149, max \$999 — all adjustable). Editable by anyone. Kept out of gross margin; pays its own commission rate with an optional incentive.
- Services (setup, haul-away, custom charges) are reported separately and excluded from margin.
- Floor sample offers the floor-sample markdown; As-is prints "all sales final, no warranty" and an acknowledgment/signature block. Both can be on the same line.

5.8 Layaway and quotes

- Layaway takes a deposit and a schedule; goods are held until paid in full and all ordered items are received; payment follow-ups are created.
- Quotes save the ticket with a valid-until date and a follow-up; convert to a sale later.

5.9 Invoices, returns and voids

- Invoices list: search, filter, fulfillment column. Open one for the tracker (Sold → Stock ready → Scheduled/Pickup planned → Delivered/Picked up), lines, payments, labels, print/email/text.
- Return / exchange: restocking or comfort-exchange fee, refund to original payment, store credit or exchange credit (opens a new sale). Returned used items become floor samples; commissions charge back in the return month.
- Void returns stock and cancels deliveries (permission required).

Orders board — status, outstanding items with ETAs, next action.

6.1 Statuses you will see

Status	Meaning
Awaiting stock · ETA Oct 1	At least one item must come from a supplier; ETA shown when set.
Ready for pickup · Sep 19	Everything is in; customer notified/planned date shown.
To schedule / Scheduled Sep 18 / Loaded / Out for delivery	Delivery lifecycle.
Partially delivered · rest to schedule	Some items went out; a follow-on delivery holds the rest.
Partially picked up · rest awaiting stock · ETA ...	Some items collected; the rest waits for the vendor.
Delivered Sep 18 / Picked up Sep 20 / Taken at sale	Complete.
Held — layaway	Released when paid off.

6.2 The pickup process

- 1 Sale set to Hold for pickup (or ordered goods on a take-today sale) appears on Deliveries & pickups → Pickups.
- 2 Receiving the supplier's PO flips it to Ready and creates a “Ready for pickup” follow-up.
- 3 Text ready messages the customer and records it; Date sets a planned pickup (reminder the day before).
- 4 Pick up: checklist of items (partial allowed), collect any balance, who picked up, ID/vehicle note, signature, printed pickup slip. Partial pickups keep the rest on the list.
- 5 Hold tags / labels mark the goods in the warehouse with the customer, invoice and date.

Deliveries & pickups More ▾ Today's routes

Calendar Route day To schedule (1) Awaiting stock / payment (2) Upcoming (3) **Pickups (2)**

Orders being held for the customer to collect. "Ready" means everything is in stock; text the customer, set a date, then complete the pickup with a signature.

Pickups tab.

6.3 The delivery process

- 1 Sale set to Home delivery creates a delivery: Awaiting stock until ordered items arrive (and layaways are paid), then To schedule.
- 2 Schedule: date (with live capacity), window, truck. The Calendar shows how full every day is.
- 3 Route day: optimize, confirm windows by text, print pick list / slips / route sheets / labels.
- 4 Crew completes the stop (chapter 8); partial deliveries create a follow-on delivery for the remaining items and open the ETA box.

6.4 ETAs and delayed items

- Set ETA / notify on any order with outstanding items: expected date and reason per item, plus a one-tap delay text to the customer. Saving an ETA also creates an “ETA check” follow-up before the date.
- Home shows Delayed items — priority: arrived but not scheduled, ETA passed, ETA due within N days, no ETA.

6.5 Hold until paid in full

With the setting on (default), pickups can't be completed and stops can't be loaded, marked arrived or completed while the invoice has a balance. Collecting the balance in the pickup window or on delivery releases it; a manager can release with confirmation/PIN and the release is recorded.

Inventory Items, kits, packages, suppliers and stock

Items Kits Packages **Purchase orders** Suppliers Price tags Promotions Stock counts

Search PO #, item, customer, vendor, cor ● placed ≤5 days ● 6-10 days ● over 10 days, chase the vendor **Reorder suggestions** **New purchase order**

Needs ordering

1 customer-order line not on a PO yet — create POs for them (one per supplier, linked to the customer so arrival releases their delivery or pickup).

Customer	Item	Supplier	Sold	Promised
INV-1009 · Marcus Bell	1x Tall oak bookcase	Ashwood Manufacturing	Sep 13	Oct 1

Open Received Vendor bills to pay (0) All

PO	Vendor	Created	Ordered	Expected	Received	Vendor invoice	Bill	Items	Lines	Total
● PO-5001 placed 3d ago	Ashwood Manufacturing	Sep 14	—	Oct 1	—	not recorded		2x Alder 6-drawer dresser (Meadow Ridge Assisted Living) 3x Tall oak bookcase	2 · 5 units special orders	\$1,040.00

Purchase orders — needs-ordering panel, search, age colors, vendor bills.

7.1 Needs ordering

The panel at the top lists customer-order lines not yet on a PO and any oversold items (sold as in-stock but stock went negative). Create POs for them makes one PO per supplier, linked to each customer's invoice so arrival releases their delivery or pickup. Reorder suggestions cover stock at or below reorder point (deliverable stock, so floor models don't hide a stock-out).

7.2 The PO lifecycle

Step	How
Draft	Add lines (search or Reorder suggestions); edit expected date and notes.
Ordered	Mark as ordered: order date, vendor confirmation #, expected arrival, how it was placed. Special-order customers' ETAs update. Vendor integrations can send the order in the vendor's format.
Age colors	Green ≤5 days since ordered, yellow 6–10, red over 10 — chase the vendor. Overdue expected dates are flagged in red and on Home.
Received	Receive items: per-line quantities (partial receipts allowed), stock and locations update, customer items flip to arrived, labels print, receiving is stamped with date and person.
Vendor invoice / bill	Enter the vendor's invoice #, date, amount (flagged if it differs from the PO), due date, freight, paid on/how. The Vendor bills to pay tab lists unpaid bills.

PO-5001 Ordered placed 3d ago

✓ Draft · Sep 14 ✓ Ordered **3 Received** 4 Bill paid

Ashwood Manufacturing · created Sep 14 by Jordan

Expected arrival: 10/01/2026 Notes: Special orders

☒ Print labels for the units received (customer holds are marked HOLD)

Close Save Print Labels ▾ Export JSON Email vendor **Receive items**

A purchase order with the tracker and vendor invoice panel.

7.3 Search

Search purchase orders by PO number, item, customer, customer invoice, supplier, confirmation # or vendor invoice #.

7.4 Supplier catalogs and vendor integrations

A supplier can import a JSON/CSV catalog feed with field mapping. When MyCoreRetail has connected a vendor, it appears under Suppliers: connect it at your own multiplier, pull the whole catalog or browse and add single items, and get “catalog updated” prompts with cost changes. Purchase orders to that supplier can be sent in the vendor's order format.

8. Deliveries, routing and the crew

8.1 Calendar and capacity

Deliveries & pickups opens on the Calendar: each day shows stops booked, pieces, and a fill bar against capacity (trucks × max stops, and truck piece capacity). Days you don't deliver are greyed. Tap a day to open its routes. When scheduling, the date field shows live availability.

Optimize this truck | All loaded | Truck departed

Route day — one card per truck with map, ETAs and stop actions.

8.3 Loading rules

All loaded / Truck departed skip stops whose invoice still has a balance (paid-in-full rule) and tell you which ones. Stops show a red hold tag. Managers can release.

8.4 Crew view (phone)

Crew opens the day's stops as cards: Navigate, Call, Text “on our way” (with ETA), Arrived, Complete stop, Can't deliver.

- Complete stop: item checklist (untick anything not delivered), haul-away and setup done, collect balance, received by, issues/damage, signature pad, up to two photos. Delivered items are stamped per line, so commissions and partial deliveries are exact.
- Can't deliver: reason, reschedule, follow-up created.
- A partial stop creates the follow-on delivery for the remaining items and opens the ETA box so the customer can be told.

Crew view on a phone.

8.5 Delivery pricing at the register

The delivery option dropdown shows the matrix fee for the customer's distance and order size with the reason ("12 mi · within 25 mi · order \$2,000+"); staff can override the fee, and "use quoted fee" snaps it back.

9. Warehouse (optional module)

For stores with a real warehouse. Turn on Settings → Optional features → Warehouse picking & storage; Warehouse appears under Operate.

Warehouse Put-away, storage, picking and staging

Pick & stage Put-away Storage bins Find an item

Service — follow-ups, sleep trials, returns, warranty claims.

- Follow-ups are created automatically: delivery check-in (+3 days), review request (+14), sleep trial ending, layaway payments, special orders arrived, ready for pickup, pickup reminders, quotes (+2), ETA checks, delivery issues. Open/snooze/done with call, text and email drafts; add manual ones.
- Sleep trials: every active trial with its end date, protector attach and a comfort-exchange button; the exchange checks the trial window and protector policy.
- Returns & exchanges: from the invoice or here; fees, refund method, restocking, chargebacks.
- Warranty claims: item, issue, vendor, warranty check, status log, vendor email draft, ring a replacement at \$0. As-is items warn before opening a claim.

11. Reports

Sales analytics — periods, comparisons, charts, employee performance.

Tab	What you get
Sales analytics	Today/week/month/quarter/year/30/90 days/12 months or any range, grouped by day/week/month, compared with the prior period. KPIs, sales over time, by employee, by day of week, by hour, this year vs last, employee performance table with per-period columns, where customers came from. CSV export, print.
Top sellers	Items, collections, categories or sub-categories by quantity or revenue with bar chart and category pie; a specific item's trend by day/week/month.
Payments	Daily collections by tender, how customers paid (and by card brand), what the money was for, card batch reconciliation against terminal totals, payment detail with terminal/approval, cash-count sign-off print.
Tax & accounting	Sales tax: taxable vs non-taxable, lease-to-own items per company (lessor remits), tax-exempt customers, zero-rate brackets, by bracket, refunds, net tax due; revenue & COGS (sale-date or delivery-date basis), gross profit, total gross revenue; inventory position on hand / showroom / committed / available / on order. Exports and a printable accounting pack.
Operations & Z report	Net sales, gross profit on merchandise, plans & services, payment methods, category mix, mattress mix & attach rates, on-time delivery, floor-sample aging, returns; Z report with cash count and accounting export.

Tab	What you get
Commissions	See 11.1.
Inventory & team / Hours	Optional: turns, GMROI, dead stock, team scorecard, vendor performance, stock by location; time-clock hours and timesheets.

Today This week **This month** Last month Quarter This year 09/01/2026 09/17/2026

Counts when delivered / picked up **More** **Print report**

Commission is counted when goods are delivered or picked up — a July sale delivered in August pays in August, and partial deliveries pay as each item goes out. Protection plans pay their own rate (20% unless set per person) and are kept out of regular commission and margins.

Salesperson	Invoices	Fulfilled sales	Gross margin	Earned	Plans	Chargebacks	Due
Jordan 0% of net sales	0	\$0.00	\$0.00 0.0%	\$0.00	—	—	\$0.00 \$0.00 sales + \$0.00 plans
Marisol 5% of net sales	1	\$438.00	\$247.92 56.6%	\$21.90	—	—	\$21.90 \$21.90 sales + \$0.00 plans \$287.23 on \$
Theo 12% of gross margin	2	\$1,634.00	\$922.28 56.4%	\$110.68	—	—	\$110.68 \$110.68 sales + \$0.00 plans \$447.52 on \$

Marisol — detail

Counted	Sold	Ref	Customer	Items	Net sales	Commission

Pipeline — sold, not yet counted

Sold	Invoice	Customer	Waiting on	Net sales	Commission
------	---------	----------	------------	-----------	------------

Commission report.

- Basis (selector on the report): counts when delivered/picked up and paid in full (recommended), when delivered/picked up, or on the sale date. A sale from July completed in September pays in September; partial deliveries pay line by line; returns charge back in the return month.
- Presets: today, week, month, last month, quarter, year, or any range. A note shows how many earlier sales completed in the period.
- Earned (merchandise) and Plans (protection plans at their own rate + incentive) are shown separately; Due adds them. Split deals pay each person their share.
- Commission rules: basis, paid-in-full, services commissionable, plan base rate, incentive % and flat \$, attach-rate goal. Pipeline column shows undelivered sold lines and pending commission.

Tax collected

\$840.84
Net tax due

Sales by tax treatment	Invoices	Sales	Tax
Taxable sales	9	\$12,012.00	\$840.84
Tax-exempt customers (resale / non-profit)	1	\$4,472.00	\$0.00
Delivery fees (not taxed)		\$594.00	\$0.00
Returns / refunds	0	-\$0.00	-\$0.00

By tax bracket

Bracket	Rate	Invoices	Taxable base	Tax collected
Sales tax	7%	9	\$12,012.00	\$840.84
Sales tax (tax-exempt customer)	0%	1	\$4,472.00	\$0.00

Lease-to-own items on companies that don't charge tax up front are listed separately — the lessor collects and remits tax on the lease payments. Tax-exempt customers are those marked exempt on their record (keep their certificates on file).

Tax & accounting — built for the CPA.

12. Staff, permissions and security

Northside Furniture & Mattress
Store NFM01

Settings

Store & tax Delivery & routing Mattress & returns Pricing & financing **Staff & permissions** Optional fees

Roles set the defaults; open a person to fine-tune every screen and action, set their discount and margin limits, and decide whether they can see costs. Everyone with "see margin" sees percentages only — costs stay hidden unless "see costs" is ticked. PINs protect sign-in and approvals.

Add staff

Name	Role	PIN	Access	Commission	
Jordan	Manager	set	sees cost approver role defaults	—	Edit
Marisol	Sales associate	none	role defaults	5% of sales	Edit
Theo	Sales associate	none	role defaults	12% of margin	Edit
Miguel	Delivery crew	none	role defaults	—	Edit

Jordan
Manager

Staff & permissions.

- Roles (manager, sales associate, cashier, delivery driver) set the defaults. Each person has a full checklist: screens (sales, catalog, orders, invoices, customers, service, inventory, purchasing, suppliers, tags, packages, deliveries, crew, warehouse, reports, commissions own/all, settings, manage staff), on a sale (see margin %, see costs, change prices, give discounts, complete with balance, quotes) and actions (void, returns, adjust stock, approve overrides with PIN).
- Limits: max discount without approval, minimum margin they may sell at.
- Commission: rate on sales or margin, protection-plan rate.
- Shared register: idle lock; salesperson PIN when the sale is credited to someone other than the signed-in user (recorded as "rung up by").
- Cost visibility: cost figures appear only for people with "see costs" — inventory, catalog, packages, reports and the margin viewer all respect it.

13. Printing, labels and Zebra printers

13.1 How printing works

Print opens the document in its own browser tab, which brings up the print dialog (the app itself runs in a protected frame that browsers won't print from). If pop-ups are blocked, a preview appears with Print, Open in new tab and Download. Documents: invoices, receipts, quotes, pickup slips, delivery slips, pick lists, route sheets, hold tags, labels, price tags, POs, transfer sheets, count sheets, reports, timesheets.

13.2 Labels

- Stock labels: item, SKU/vendor #/model, color/finish/size, bin, price, Code 128 barcode.
- Customer/delivery labels: logo, BOX n OF N (every piece across the order), customer, invoice, phone, delivery date/window/truck or pickup date, item and “piece 2 of 3”, barcode.
- Where: item rows, inventory selection, catalog selection, purchase orders (ordered/received), invoices, route day, warehouse, Settings → Test label.

13.3 Zebra setup

Connection	Setup
Installed driver	Install the Zebra driver, set the label size in Printing preferences → Page setup to match the stock chosen in the app, pick the Zebra in the print dialog with margins none.
Zebra Browser Print	Install Zebra Browser Print on the register, add the printer, enter its name in Settings → Label printer. “Send to Zebra” goes straight to it; if the local agent can't be reached the ZPL downloads instead.
Network Zebra	Download the ZPL file and drop it on the printer's share, or send with Zebra Setup Utilities.

Label stock: 2.25×1.25, 3×2, 4×2 (recommended), 4×3, 4×6, or a 6-up letter sheet; 203 or 300 dpi; logo on 3×2 and larger.

14. Troubleshooting & FAQ

Question	Answer
A new setting or screen doesn't appear.	Refresh the page (or close and reopen) so the device loads the latest version.
The card panel didn't open.	Settings → Pricing → Card processing: the panel switch must be on (it is by default). Choose Card, then Add.
Nothing prints.	Allow pop-ups for the app, or use the preview's Open in new tab / Download.
An item sold but never reached purchasing.	It was switched to “treat as in stock”. Check Purchase orders → Needs ordering (oversold items) and Reorder suggestions.
Commission for a sale isn't showing this month.	Check the basis on the report: it counts when delivered/picked up (and paid in full). Undelivered lines sit in the pipeline column.
The register says the customer is missing details.	Name (or company), phone, address and “how did they hear about us?” are required; the dropdown for the last one is under the customer on the register.
A pickup can't be completed.	The invoice has a balance and “hold goods until paid in full” is on. Collect the balance in the pickup window or have a manager release.
Floor model shows as special order.	Only warehouse stock is deliverable. Mark the line Floor sample to sell the showroom unit.
Where is the time clock?	Optional feature. Once on, staff clock in from the account menu (...); Reports → Hours.
Can I use my own colors / logo?	Settings → Store & tax → Store colors (16 themes or custom) and Logo placement.
Can the register charge my card terminal automatically / sync vendor prices live / look up addresses like Google?	These need a connection to outside services. The settings are in place; ask MyCoreRetail support about enabling the relay for your store.

Appendix A — Glossary

Term	Meaning
Landed cost	Vendor cost + freight + extras + surcharge; the cost used for margins and inventory value.
MAP	Vendor's minimum advertised price; a hard floor for prices, promotions and tags.
Order from supplier	A line the store must buy from a vendor for this customer (formerly “special order”).
Fulfillment	Takes it today, hold for pickup, or home delivery.
Follow-on delivery	The automatic second delivery created for items not delivered on a partial stop.

Term	Meaning
Attach rate	Share of merchandise sales that included a plan (or protector/base for mattresses).
Deliverable stock	Stock in non-display locations; floor models are excluded.
Staged	Picked and placed in a staging area, ready to load or hand over.

Appendix B — Shortcuts and scanning

- Register: press Enter in the item box to add the first match; M toggles the margin viewer; double-tap the title does the same.
- USB barcode scanners work anywhere an item search box is focused; the camera scanner (Scan button) reads tags on phones and tablets.
- Warehouse: scan a SKU into the pick box to mark it picked.
